LECTURE SCIENTIFIC INTELLIGENCE DURING WORLD WAR II

R. V. Jones, Professor of Natural Philosophy at the University of Aberdeen, Scotland, has been invited by the Director to speak to Agency personnel on Developments and Achievements in Scientific Intelligence during World War II. Professor Jones' presentation is scheduled in the Auditorium from 1030 to 1200 hours on Friday, 2 March 1973.

Professor Jones, a pioneer and recognized expert in the field of scientific intelligence, was the first scientist appointed to the Intelligence Division of the British Air Ministry just prior to the outbreak of the War in 1939. During World War II he served as Deputy Director and Director of Scientific Intelligence in the Air Ministry and returned as Director again in 1953-54.

Although much time has passed since the events in which Professor Jones played a significant part, the substantial accomplishments made by intelligence during this critical and dramatic period are well worth re-telling. A recounting such as this, which highlights innovation and insight, serves as a useful reminder of the decisive role good intelligence can play.

Interested Agency employees are encouraged to attend. Because of expected employee interest, admittance will be by ticket, which can be obtained from the Senior Training Officers. One hundred tickets have been allotted to each of the Directorates.
